## Street Furniture Refurbishment:

### The challenge

Community Clean has undertaken a large amount of town centre enhancement work for Bracknell Forest Borough Council. The project included the refurbishment of cycle racks, benches, planters, litter bins and the High Street Entrance Structure.

### What do we do

Due to the high footfall in the Town Centre our teams worked early in the morning to minimise any disruption to the public. All the items were barriered off, surfaces were prepared mechanically to the specification of the customer and only specialist, hard wearing, quick drying paints and varnishes were used.

### The outcome

The project was completed to a very high standard and on time. We received some excellent feedback from our client and from members of the public.

“Community Clean have proven time and again that they respond well to a challenge. At Bracknell Forest Council we have looked to them to help us solve a range of issues over the years. Most recently they were tasked with the refurbishment of the very varied artwork in our town centre subways and then re coating them with a protective anti-graffiti coating. They were then asked to repair and repaint planters, litter bins and finally a high level decorative archway all in the busy Town Centre.

The works were completed to a very high standard and with no disruption to shoppers or commercial premises. During the works we were impressed by the organisational arrangements and commitment of the Community Clean team. We got many complimentary comments back about the work and the staff from both the public and the retailers. I know that there were one or two members of the public that were a bit challenging but the staff handled the few instances that there were extremely professionally.

From my experience I would have no hesitation at all in recommending Community Clean as being a very reliable and professional service provider.”
